James Hose

(240) 920-9068 | hosejames4@gmail.com | LinkedIn | GitHub

University of Maryland Computer Science student with hands-on full-stack development experience building production systems including state machines, ledgers, and automated pipelines. Skilled in test automation, deterministic system design, and API integration; seeking to apply backend and testing expertise to ensure reliability and quality in AI infrastructure systems.

EXPERIENCE

Sales & Marketing Representative | *Renewal by Andersen* Bedford, PA · Jun 2026 - Aug 2026

- Ranked #1 of 25+ representatives, generating over $132,000 in signed sales in July through disciplined direct outreach and systematic follow-up processes
- Set an average of 4 qualified appointments per day, demonstrating ability to execute repeatable procedures and measure outcomes against clear benchmarks

Full-Stack Developer | *SleepPool (Personal Project)* 2026

- Engineered a deterministic, idempotent settlement engine with an append-only, integer-cent ledger and provable money-conservation invariant, demonstrating rigorous attention to correctness in financial systems
- Designed a TypeScript monorepo with 3 packages sharing a pure-logic core containing a 7-state pool lifecycle state machine and 5 anti-cheat heuristics, covered by 55 unit tests to catch regressions early
- Implemented durable scheduled jobs (Inngest) that automatically lock and settle pools, plus a HealthKit pipeline that merges overlapping multi-source sleep samples into per-night totals, ensuring data reliability
- Built a cross-platform iOS app (React Native) where users stake money against real Apple HealthKit data rather than self-reported input, reducing test surface area through integration with trusted external sources

Automation Engineer | *YouTube Content Pipeline (Personal Project)* 2026

- Built a fully automated pipeline running 2 YouTube channels for 100+ consecutive days with no manual intervention, scheduled with cron on an Oracle Cloud Linux VM, demonstrating reliability and uptime discipline
- Produced 100+ long-form videos and 1,600+ short-form clips end-to-end via script generation (Anthropic API), text-to-speech, ffmpeg assembly, and automated YouTube OAuth uploads, cross-posted to TikTok and Instagram
- Implemented a data-driven feedback loop using weekly analytics to weight topic selection toward high-view content, with Telegram health-check alerting that flags failed runs automatically for rapid incident response

Community Assistant | *UMD Department of Resident Life* College Park, MD · Aug 2025 - Present

- Use digital tracking systems to manage 100+ resident requests weekly, demonstrating process management and attention to operational detail at scale
- Audit and maintain 708 keys, 200+ packages, and 30 access passes with full accountability and systematic record-keeping
- Balance 17-25+ weekly work hours with a full-time Computer Science course load

EDUCATION

University of Maryland, College Park, MD | B.S. in Computer Science
May 2028 | Gemstone Honors Program | Relevant Coursework: Object-Oriented Programming I & II, Calculus I & II, Linear Algebra

SKILLS

Languages: TypeScript, Python, Java, C, SQL, HTML/CSS; Frameworks & Tools: React Native, Expo, Node.js, Hono, Prisma, PostgreSQL, Inngest, Git, REST APIs, OAuth, ffmpeg, Linux/cron

ACTIVITIES & LEADERSHIP

Secretary | *Maryland Sports Analytics* Sep 2025 - Present

Member | *Undergraduate Quantum Association* Sep 2025 - Present
